

macOS 13 Secure Browser Bulletin

macOS 13 Secure Browser version update

While testing newly released operating systems, we found that the Secure Browser does not open using macOS 13. The issue has been corrected by upgrading the version of the sub-module which resulted in a new version of macOS Secure Browser.

Students using macOS 13+ must use the updated version of the macOS Secure Browser 4.2.0. The updated version will be available for partners to download on 03/10/2023 by the end of the day.

No action is required for devices using macOS 12 and below, iPadOS, Windows or Chromebook operating system. The current versions of the Secure Browser can be used for testing:

- macOS 13 and above must use: 4.2.0
- macOS 12 and below: 4.1.0
- Windows: 4.1.0
- Chromebook: 3.3.0
- iPadOS: 3.2.0

It is recommended to turn off automatic updates for operating systems during testing windows. Secure Browsers can be accessed via <https://securebrowser.state.nwea.org/>.
